Hi, Peter,

There is a long report on health effects of turbines, at Waubra, Victoria, Australia, on the website:

www.windaction.org

It is a scientific report paid for by Noel Dean, who gets very sick from turbines at Waubra. He gets bad migraines, and can no longer live on his farm. The report was handed over officially a few weeks ago to one of our politicians, who is up for election again in a few days time. Another lady at Waubra, Trish Godfrey, was also sick from the turbines, and was interviewed on television, and in newspapers. Her property was then bought by the wind company, Acciona.

I will also attach a SUMMARY of the Noel Dean report with this email.

all the best,

our land is being destroyed by wind turbines that do not provide reliable energy, and kill bird life and bats, and make people sick from the noise.

Good luck in your fight against them.

Renate Metzger
